

## **Mallory Capp BSN, RN**

Mallory Capp has been a Registered Nurse for over 14 years. She graduated in 2009 from Bellarmine University in Louisville, KY with her Bachelor of Science in Nursing. After graduation, she returned to her home state of Michigan and spent twelve years in the intensive care units at a Level 1 Trauma Hospital in Downtown Detroit. As an ICU nurse Mallory was exposed to every aspect of the acute care hospital setting: Medical, Surgical, Neuro, Cardiac, and Trauma. She specialized in education, emergency medicine, and end of life care.

Her last two years in the Medical intensive care unit, Mallory was promoted into a leadership position as the Unit Educator. In this role, she not only continued to provide patient care, but she oversaw new hire orientation, unit compliance standards, continued education, and team building.

During the COVID pandemic, Medical ICUs were organized into COVID treatment units. As a veteran ICU nurse, Mallory led her team through all stages of the pandemic and ensured the quality of patient care never wavered. Frustrated by the lack of preventative and early treatments being promoted by large-scale healthcare systems, her focus turned away from end-of-life care into promoting health, wellness, and early treatment. She researched treatment methodologies and prevention measures being utilized by doctors worldwide, including right here in Michigan.

Hence the founding of her company Michigan Immune Defense (MID), an IV infusion therapy company that focuses on health at the cellular level. She started MID not to be another med spa clinic, but instead to provide support to patients before, during, and after illness. MID's infusion protocols are based on research and outcomes that focus on promoting wellness, longevity, and combating illness naturally.

In addition to nursing, Mallory is a public safety instructor teaching medical response and self-defense. She is a Krav Maga Black Belt and takes great pride preparing the community for any type of emergency. She has the utmost value for life and for living it to its fullest. It is her goal to provide all people the chance to not only survive but thrive in this life and beyond.

## **Michigan Immune Defense**

At Michigan Immune Defense, we are focused on health at the cellular level. Like the foundation of a house, the cells of our body are what support us, fortify us, and give us life.

Cellular Targeted Health Services such as IV Infusion and IM Injectable therapies are one of the most effective ways to optimize your health and wellness. Intravenous and intramuscular routes of administration bypass the digestive system, allowing for complete bioavailability of essential micronutrients to our cells.

It is time to expand our view of the health of our bodies to a deeper level. Cells have a lifespan far shorter than our bodies. If our cells are not given what they need before they reproduce, then they will reproduce more unhealthy cells repeatedly before they die. This is the true beginning of disease and chronic health conditions. Poor cellular health today can lead to long term issues in the future. Vitality and longevity can best be achieved by utilizing cellular targeted health services throughout the lifetime.

Using nutrients found naturally in the human body, our IV infusions help restore, replenish, and enhance all body processes. From athletes, business professionals, and parents, all of us consistently need ways to achieve and maintain our peak performance. Healthcare should not start when people are already sick. The body's cells and natural immune system can be supported to better defend itself and prevent disease.

Michigan Immune Defense is made up of licensed healthcare professionals with years of vast clinical experience. We take pride in bringing you services and care of the highest quality.
